Notes

Week 4: Solving Linear Systems $\qquad$
$\qquad$

Course Notes: 3.2, 3.3, 3.4

Goals: Learn the method of Gaussian elimination to efficiently solve linear systems; describe infinite families of solutions as parametric equations; use properties of associated homogeneous systems.

- Multiply one row by a non-zero scalar
- Add a multiple of one row to another
- Interchange rows

These operations will change the system of equations, but will not change the solutions of the system
$\left[\begin{array}{lll|l}1 & 2 & 4 & 34 \\ 1 & 1 & 0 & 13 \\ 0 & 1 & 2 & 11\end{array}\right]$

| Course Notes: 3.2, Gaussian Elimination 000000000000 | 3.3: Homogeneous Equations 000 | 3.4: Geometric Applications 00000000000 |
| :---: | :---: | :---: |
| Quick Notation |  |  |

Row Echelon Form: the position of the first non-zero entry in a row strictly increases from one row to the row below it.

$$
\left[\begin{array}{cccccc|c}
2 & 3 & 5 & 2 & 5 & 9 & 13 \\
0 & 5 & 4 & 3 & 4 & 0 & 11 \\
0 & 0 & 0 & 3 & 2 & 2 & 5 \\
0 & 0 & 0 & 0 & 0 & 0 & 0
\end{array}\right]
$$

Reduced Row Echelon Form: the first non-zero entry in every row is a 1 , and is the only non-zero entry in its column; the position of the first non-zero entry in a row strictly increases with every row.

$$
\left[\begin{array}{cccccc|c}
1 & 0 & 0 & 2 & 0 & 0 & 13 \\
0 & 1 & 4 & 5 & 0 & 0 & 11 \\
0 & 0 & 0 & 0 & 1 & 0 & 5 \\
0 & 0 & 0 & 0 & 0 & 0 & 0
\end{array}\right]
$$

Gaussian Elimination

Use row operations to change this system to reduced row echelon form.

$$
\left[\begin{array}{ccc|c}
2 & 2 & -6 & -16 \\
3 & -2 & 1 & 11 \\
-1 & 3 & 1 & -2
\end{array}\right]
$$

Course Notes: 3.2, Gaussian Elimination
OOO
Gaussian Elimination

Use row operations to change this system to reduced row echelon form.
$\left[\begin{array}{ccc|c}1 & 1 & 1 & 1 \\ 2 & 0 & 2 & 8 \\ 5 & 3 & 6 & 10\end{array}\right]$
(Try to do it using at most 6 row operations!)

| Course Notes: 3.2, Gaussian Elimination 000000000000 | 3.3: Homogeneous Equations 000 | 3.4: Geometric Application 00000000000 |
| :---: | :---: | :---: |
| Gaussian Elimination |  |  |

Notes

Use row operations to change this system to reduced row echelon form.

$$
\left[\begin{array}{ccc|c}
1 & 2 & -1 & 15 \\
4 & 4 & 0 & 36 \\
3 & -1 & 6 & -31
\end{array}\right]
$$

(Try to do it using at most 8 row operations!)

How many solutions?
$\left[\begin{array}{lll|l}1 & 0 & 0 & * \\ 0 & 1 & 0 & * \\ 0 & 0 & 1 & *\end{array}\right]$
$\left[\begin{array}{lll|l}1 & 0 & 0 & * \\ 0 & 1 & 1 & *\end{array}\right]$
$\left[\begin{array}{lll|l}1 & 0 & 0 & * \\ 0 & 1 & 1 & * \\ 0 & 0 & 0 & *\end{array}\right]$
The rank of a matrix (without its augmented part) is the number of non-zero rows in the matrix obtained after reducing it. If a matrix has rank $r$ and $n$ columns, then the solution will require parameters (provided a solution exists at all).

## $\begin{array}{lll}\text { Course Notes: 3.2. Gaussian Elimination } & \text { 3.3: Homogeneous Equations } \\ \text { Ooocoocoocoos. } & \text { 3.4: Geometric Applications }\end{array}$ <br> Homogeneous Systems <br> System of equations: <br> $\left[\begin{array}{lll|l}3 & 4 & 5 & 6 \\ 1 & 2 & 3 & 4 \\ 7 & 8 & 9 & 0\end{array}\right]$

Associated homogeneous system of equations:
$\left[\begin{array}{lll|l}3 & 4 & 5 & 0 \\ 1 & 2 & 3 & 0 \\ 7 & 8 & 9 & 0\end{array}\right]$

## Course Notes: 3.2, Gaussian Elimination 000000000000 0000000000 <br> 3.3:

## Notes

$\left[\begin{array}{lll|l}3 & 4 & 5 & 0 \\ 1 & 2 & 3 & 0 \\ 7 & 8 & 9 & 0\end{array}\right]$

Give a solution to this equation.

Suppose $\mathbf{a}$ and $\mathbf{b}$ are solutions to a homogeneous system of equations.

Then $\mathbf{a}+\mathbf{b}$ is also a solution.

Also, ca is a solution for any scalar $c$.

| :--- | :--- | :--- |
| Connection to Non-homogeneous Systems |  |  |

Connection to Non-homogeneous Systems
Notes

Suppose $A$ is an augmented matrix, and $A_{0}$ is its associated homogeneous system.
If $\mathbf{a}$ and $\mathbf{b}$ are solutions to $A$, then $\square$ is a solution to $A_{0}$.

$$
\begin{aligned}
& A=\left[\begin{array}{cccc|c}
4 & 1 & -1 & 4 & 13 \\
11 & 3 & -1 & 13 & 42 \\
-7 & -2 & 1 & -8 & -26 \\
4 & 1 & 0 & 5 & 16
\end{array}\right] \\
& A_{0}=\left[\begin{array}{cccc|c}
4 & 1 & -1 & 4 & 0 \\
11 & 3 & -1 & 13 & 0 \\
-7 & -2 & 1 & -8 & 0 \\
4 & 1 & 0 & 5 & 0
\end{array}\right]
\end{aligned}
$$

Given one solution $\mathbf{q}$ to $A$, every solution to $A$ can be written in the form $\mathbf{q}+\mathbf{a}$ for some solution $\mathbf{a}$ of $A_{0}$.

| Rank and Linear Independence |  |  |

Suppose this matrix has rows that are linearly independent:

$$
\left[\begin{array}{llll}
* & * & * & * \\
* & * & * & * \\
* & * & * & * \\
* & * & * & *
\end{array}\right]
$$

What is its reduced form going to be?

$$
\left[\begin{array}{llll}
1 & 0 & 0 & 0 \\
0 & 1 & 0 & 0 \\
0 & 0 & 1 & 0 \\
0 & 0 & 0 & 1
\end{array}\right]
$$

| Course Notes: 3.2 , Gaussian Elimination <br> 000000000000 | 3.3: Homogeneous Equations <br> 000 | 3.4: Geometric Applications <br> 00000000000 |
| :--- | :--- | :--- |
| Rank and Linear Independence |  |  |

Notes

Suppose this augmented matrix has rows that are linearly independent:
$\left[\begin{array}{lllll|l}* & * & * & * & * & 0 \\ * & * & * & * & * & 0 \\ * & * & * & * & * & 0 \\ * & * & * & * & * & 0\end{array}\right]$

What will its solutions set be? (Point, line, plane, etc.)

|  |  | 3.4: Geometric Applications 0000000000 |
| :---: | :---: | :---: |
| Geometry in Unima | e Dimensions |  |

Notes

What does the equation $0 x_{1}+0 x_{2}+0 x_{3}+x_{4}=0$ describe in $\mathbb{R}^{4}$ ?
In general, an equation of the form $a_{1} x_{1}+a_{2} x_{2}+a_{3} x_{3}+a_{4} x_{4}=a_{5}$
describes a three-dimensional space in $\mathbb{R}^{4}$.
What will be the intersection of four linearly-independent
3-dimensional spaces of this type?
What will be the intersection of $n$ linearly-independent
( $n-1$ )-dimensional spaces of this type in $\mathbb{R}^{n}$ ?

## Course Notes. 3.2, Gaussian enination 3.4. Geometric Application 000000000000 000 3.000•000000

Check this collection of vectors for linear independence:
$\mathbf{a}=\left[a_{1}, a_{2}, a_{3}\right], \mathbf{b}=\left[b_{1}, b_{2}, b_{3}\right]$, and $\mathbf{c}=\left[c_{1}, c_{2}, c_{3}\right]$.
Recall
Vectors $\mathbf{a}_{1}, \mathbf{a}_{2}, \ldots, \mathbf{a}_{n}$ are linearly independent if the equation

$$
s_{1} \mathbf{a}_{1}+s_{2} \mathbf{a}_{2}+\cdots+s_{n} \mathbf{a}_{n}=\mathbf{0}
$$

has only one solution, $s_{1}=s_{2}=\cdots=s_{n}=0$.

$$
s_{1} \mathbf{a}+s_{2} \mathbf{b}+s_{3} \mathbf{c}=\mathbf{0}
$$

$\left[\begin{array}{l}s_{1} a_{1} \\ s_{1} a_{2} \\ s_{1} a_{3}\end{array}\right]+\left[\begin{array}{l}s_{2} b_{1} \\ s_{2} b_{2} \\ s_{2} b_{3}\end{array}\right]+\left[\begin{array}{l}s_{3} c_{1} \\ s_{3} c_{2} \\ s_{3} c_{3}\end{array}\right]=\left[\begin{array}{l}0 \\ 0 \\ 0\end{array}\right]$
$\left\{\begin{array}{l}a_{1} s_{1}+b_{1} s_{2}+c_{1} s_{3}=0 \\ a_{2} s_{1}+b_{2} s_{2}+c_{2} s_{3}=0 \\ a_{3} s_{1}+b_{3} s_{2}+c_{3} s_{3}=0\end{array} \rightarrow\left[\begin{array}{lll|l}a_{1} & b_{1} & c_{1} & 0 \\ a_{2} & b_{2} & c_{2} & 0 \\ a_{3} & b_{3} & c_{3} & 0\end{array}\right]\right.$

$\qquad$

$$
\mathbf{a}=[1,1,1,1], \quad \mathbf{b}=[2,1,1,1]
$$

Are $\mathbf{a}$ and $\mathbf{b}$ linearly independent?

$$
\begin{aligned}
& x_{1} \mathbf{a}+x_{2} \mathbf{b}=\mathbf{0}: \\
& {\left[\begin{array}{ll|l}
1 & 2 & 0 \\
1 & 1 & 0 \\
1 & 1 & 0 \\
1 & 1 & 0
\end{array}\right]}
\end{aligned}
$$

Can we row-reduce this matrix to get a row of all 0 s?

$$
\left[\begin{array}{llll}
1 & 1 & 1 & 1 \\
2 & 1 & 1 & 1
\end{array}\right]
$$

| Course Notes: 3.2, Gaussian Elimination 000000000000 | 3.3: Homogeneous Equations 000 | 3.4: Geometric Applications 0000000000 <br> 0000000000 |
| :---: | :---: | :---: |
| Checking Vectors for | ear Independen |  |

Are $\mathbf{a}_{1}, \mathbf{a}_{2}, \ldots, a_{\mathrm{n}}$ are linearly independent? (Two ways.)

$$
\left[\begin{array}{cccc|c}
\mid & \mid & & \mid & 0 \\
a_{1} & a_{2} & \cdots & a_{n} & \vdots \\
\mid & \mid & & \mid & 0
\end{array}\right] \quad\left[\begin{array}{ccc}
-- & a_{1} & -- \\
-- & a_{2} & -- \\
& \vdots & \\
-- & a_{n} & --
\end{array}\right]
$$

- If there is only one solution, the vectors are linearly independent.
- If there is more than one
solution, the vectors are
linearly dependent.
- If the reduced matrix has
no rows of all zeroes, the vectors are linearly
independent.
- If the reduced matrix has
some row of all zeroes, the
vectors are linearly dependent.
