```

Outline

Week 9: complex numbers; complex exponential and polar form

Course Notes: 5.1, 5.2, 5.3, 5.4

Goals:
Fluency with arithmetic on complex numbers
Using matrices with complex entries: finding determinants and
inverses, solving systems, etc.
Visualizing complex numbers in coordinate systems

| 5.1: Complex Arithmetic $0 \cdot 00000$ |  | ex Matrices and Linear Systems | 5.3: Complex Exponential 0000000 | 5.4: Polar Representation 000 |
| :---: | :---: | :---: | :---: | :---: |

Complex Arithmetic

Addition happens component-wise, just like with vectors or polynomials.

Complex Arithmetic
Notes

Multiplication is similar to polynomials.

|  | I: 0 |
| ---: | :--- |
| A: $(-4+3 i)+(1-i)$ | II: -1 |
| B: $i(2+3 i)$ | III: -2 |
| C: $(i+1)(i-1)$ | IV: $2 \mathrm{i}+12$ |
| D: $(2 i+3)(i+4)$ | V: $: 3+2 \mathrm{i}$ |
|  | VI: $3+2 \mathrm{i}$ |
|  | VII: $10+11 \mathrm{i}$ |

Modulus
The modulus of $(x+y i)$ is:

$$
|x+y i|=\sqrt{x^{2}+y^{2}}
$$

like the norm/length/magnitude of a vector.

Complex Conjugate
The complex conjugate of $(x+y i)$ is:

$$
\overline{x+y i}=x-y i
$$

the reflection of the vector over the real ( x ) axis

```

Complex Arithmetic
Notes

$$
\frac{z}{w}=\frac{z \bar{w}}{|w|^{2}}
$$

## Compute:

Polynomial Factorizations

Fundamental Theorem of Algebra
Every polynomial can be factored completely over the complex numbers.

Example: $x^{2}+1=x^{2}-(-1)=x^{2}-i^{2}=(x-i)(x+i)$
$f(x)=x^{2}+1$ has no real roots, but it has two complex roots
It is not factorable over $\mathbb{R}$, but it is factorable over $\mathbb{C}$

## Calculating Determinants

We calcuate the determinant of a matrix with complex entries in the same way we calculate the determinant of a matrix with real entries.

$$
\begin{array}{r}
\operatorname{det}\left[\begin{array}{cc}
1+i & 1-i \\
2 & i
\end{array}\right]= \\
\operatorname{det}\left[\begin{array}{ccc}
1 & 2 & 3 \\
i & 4 & 3 i \\
1+i & 2-i & 5
\end{array}\right]=
\end{array}
$$

Gaussian Elimination

Give a parametric equation for all solutions to the homogeneous system:

| $i x_{1}+\quad x_{2}+2 x_{3}$ | $=0$ |
| ---: | :--- |
| $i x_{2}+3 x_{3}$ | $=0$ |
| $2 i x_{1}+(2-i) x_{2}+x_{3}$ | $=0$ |

Solve the following system of equations:

$$
\begin{array}{rlrr}
i x_{1}+r & 2 x_{2} & = & 9 \\
3 x_{1}+(1+i) x_{2} & = & 5+8 i
\end{array}
$$

Find the inverse of the matrix $\left[\begin{array}{cc}i & 1 \\ 2 & 3 i\end{array}\right]$

## $\begin{array}{lllll}\text { 5.1: Complex Arithmetic } & \text { 5.2: Complex Matrices and Linear Systems } & \text { 5.3: Complex Exponential } & \text { 5.4: Polar Representation } \\ \text { 0000000 } & \text { 0000000 } & & & \end{array}$ <br> Exponentials

What to do when $i$ is the power of a function ?
Maclaurin (Taylor) Series: (you wont be assessed on this explanation)

$$
\begin{gathered}
e^{x}=1+x+\frac{x^{2}}{2!}+\frac{x^{3}}{3!}+\frac{x^{4}}{4!}+\frac{x^{5}}{5!}+\frac{x^{6}}{6!}+\cdots \\
\sin (x)=x-\frac{x^{3}}{3!}+\frac{x^{5}}{5!}-\frac{x^{7}}{7!}+\cdots \\
\cos (x)=1-\frac{x^{2}}{2!}+\frac{x^{4}}{4!}-\frac{x^{6}}{6!}+\cdots \\
e^{i x}=1+i x+\frac{(i x)^{2}}{2!}+\frac{(i x)^{3}}{3!}+\frac{(i x)^{4}}{4!}+\frac{(i x)^{5}}{5!}+\frac{(i x)^{6}}{6!}+\cdots \\
=1+i x-\frac{x^{2}}{2!}-i \frac{x^{3}}{3!}+\frac{x^{4}}{4!}+i \frac{x^{5}}{5!}-\frac{x^{6}}{6!} \cdots \\
=\left(1-\frac{x^{2}}{2!}+\frac{x^{4}}{4!}-\frac{x^{6}}{6!}+\cdots\right)+i\left(x-\frac{x^{3}}{3!}+\frac{x^{5}}{5!}-\cdots\right) \\
=\cos x+i \sin x
\end{gathered}
$$

$$
\begin{aligned}
& e^{i x}=\cos x+i \sin x \\
& \frac{d}{d x}\left[e^{a x}\right]=a e^{a x} ; \\
& e^{x+y}=e^{x} e^{y} ;
\end{aligned}
$$

$\qquad$

[^0]$$
e^{i x}=\cos x+i \sin x
$$

Evaluate:
$e^{\frac{\pi i}{2}}$
$e^{2+i}$
$\sqrt{2} e^{\frac{\pi i}{4}}$
$2^{i}$
$e^{\pi i}+1$
$\left|e^{x i}\right|$, where $x$ is real.

Complex exponentiation: $e^{i x}=\cos x+i \sin x$

Let $x$ be a real number.
True or False?
(1) $e^{x}=\cos x$
(2) $e^{i x}=e^{i(x+2 \pi)}$
(3) $e^{i x}=-e^{i(x+\pi)}$
(4) $e^{i x}+e^{-i x}$ is a real number
