Common Midterm 2 for Sections of MATH 184 (Version 1)

Closed book examination

Time: 60 minutes

Last Name _____ First _____

Signature _____

Student Number _____

MATH 184 Section Number: _____

Special Instructions:

No memory aids are allowed. No calculators. No communication devices. Show all your work; little or no credit will be given for a numerical answer without the correct accompanying work. If you need more space than the space provided, use the back of the previous page.

Rules governing examinations

- Each candidate must be prepared to produce, upon request, a UBCcard for identification.
- Candidates are not permitted to ask questions of the invigilators, except in cases of supposed errors or ambiguities in examination questions.
- Candidates suspected of any of the following, or similar, dishonest practices shall be immediately dismissed from the examination and shall be liable to disciplinary action.
 - (a) Having at the place of writing any books, papers or memoranda, calculators, computers, sound or image players/recorders/transmitters (including telephones), or other memory aid devices, other than those authorized by the examiners.
 - (b) Speaking or communicating with other candidates.
 - (c) Purposely exposing written papers to the view of other candidates or imaging devices. The plea of accident or forgetfulness shall not be received.
- Candidates must not destroy or mutilate any examination material; must hand in all examination papers; and must not take any examination material from the examination room without permission of the invigilator.
- Candidates must follow any additional examination rules or directions communicated by the instructor or invigilator.

3		9
4		5
5		10
6		6
Total		50

Short-Answer Questions: Put your answer in the box provided. Full marks will be given for a correct answer placed in the box, while part marks may be given for work shown. Unless otherwise stated, calculator ready answers are acceptable.

[15] 1.

(a) Find $\frac{dy}{dx}$, where $y = \cos^4 x + \cos(x^4)$.

Answer:

(b) Find $f'(x)$, where $f(x) = \ln(\ln(2x))$.

Answer:

(c) Find the critical point(s) of $f(x) = \frac{1}{8}x^3 - \frac{1}{2}x$.

Answer:

(d) Find the vertical and horizontal asymptotes of $f(x) = \frac{2x^3 - 2x^2 - 6x}{x^3 + 3x^2}$. Please write the vertical asymptote(s) in Answer 1, and write the horizontal asymptote(s) in Answer 2.

Answer 1:

Answer 2:

- (e) Let A be the absolute maximum value of $f(x) = x^{\frac{2}{3}}$ on the interval $[-8, 1]$, and let B be the absolute minimum value of $f(x) = x^{\frac{2}{3}}$ on the interval $[-8, 1]$. Find A and B .

Answer:

$A =$ _____, $B =$ _____

Full-Solution Problems: Justify your answers and show your work. Place a box around your final answer. Unless otherwise indicated, simplification of answers is required in these questions.

[5] **2.** Sand falls from an overhead bin, accumulating in a conical pile with a radius that is always four times its height. If the sand falls from the bin at a rate of $24 \text{ ft}^3/\text{min}$, how fast is the height of the sandpile changing when the pile is 8 ft high? (Hint: the volume of a cone is given by $V = \frac{1}{3}\pi r^2 h$.)

[9] **3.**

(a) Find the slope of the tangent line to the curve defined by

$$3(x^2 + y^2)^2 = 25(x^2 - y^2)$$

at the point $(2, 1)$.

- (b) Consider the function $f(x) = (\sin x)^{\cos(3x)}$, defined on $(0, \frac{\pi}{2})$. Find the derivative $f'(x)$ of $f(x)$.

[5] 4. Assume that the price p and the demand q of a certain good are related by the equation

$$q = 10e^{1-p} + \frac{5}{p+1}.$$

(a) Find the price elasticity $E(p)$ of demand in terms of p and q .

(b) If $p = 1$, does increasing price slightly increase revenue?

[10] 5. Let $f(x) = (\ln x)\sqrt{x}$.

(a) Find the intervals on which $f(x)$ is increasing or decreasing.

(b) Find the intervals on which $f(x)$ is concave up or concave down.

(c) Sketch the graph of $f(x)$.

[6] 6. The student A borrowed \$6000 from the student B who had taken Math 184, and who therefore had a preference for continuous compounding. Two years later the student B informed the student A that his debt had grown to \$7260. So the student A paid the student B \$4260, and paid off the rest of the debt one year later. What was that final payment?
