

Instructor: Dr. Geoffrey Schiebinger, Math 118, geoff@math.ubc.ca.

Office hours: Mon. 3:00 to 3:50, Tues 11:00 - 11:50, Fri 1:00 - 1:50 or by appointment.

Course website: <http://www.math.ubc.ca/~geoff/courses/W2019T2/Math318.html>

Text: The course text is S.M. Ross, "Introduction to Probability Models," 12th edition, Academic Press, (2010). The 10th and 11th editions are indistinguishable for our purposes, apart from changes to page numbers, and you should feel free to use them. Problems assigned from the text will be identical to those in the 11th and 10th editions. If you are using an older version, please consult with the 12th edition to be sure to do the correct homework problems.

An optional more advanced reference is G.R. Grimmett and D.R. Stirzaker, "Probability and Random Processes," 3rd edition, Oxford, (2001).

Outline: The course was originally designed for physics and engineering physics students, but students in mathematics, electrical and computer engineering, and other disciplines may also find it useful. The course will be based primarily on topics from the first five chapters of Ross. Highlights include:

1. Probability spaces
2. Independence and conditional probability
3. Discrete and continuous random variables
4. Expectation
5. Generating functions and characteristic functions
6. Convergence of random variables
7. Law of large numbers and central limit theorem
8. Confidence intervals
9. Discrete Markov chains
10. Random walk
11. Poisson process

Evaluation: There will be homework assignments, two tests, and a final exam.

Homework: Nine assignments will be given and marked for credit. Assignments are due at the beginning of class on the due date. *No late assignments will be accepted.* The assignment schedule is as follows:

<u>Assignment given</u>	<u>Assignment due</u>
January 8	January 15
January 15	January 22
January 22	January 29
January 29	February 5
February 12	February 26
February 26	March 4
March 4	March 11
March 11	March 18
March 25	April 1

Tests: There will be two 50-minute tests held during the regularly scheduled class hours on the following dates:

Monday, February 10, Monday, March 23.

Missing a test normally results in a mark of zero. Exceptions may be granted in two cases: prior consent of the instructor or a medical emergency. In the latter case, the instructor must be notified within two working days of the missed test, and presented with a doctor's note immediately upon the student's return to UBC. When an exception is granted for a missed test, there is no make-up test, and the final exam mark will be used.

Final exam: There will be a final examination during the April examination period.

Final mark: The final mark will be calculated as follows:

Homework: 10%

Tests: 20% each

Final exam: 50%

Prerequisites: You must have taken one of MATH 152, MATH 221, MATH 223, and also one of MATH 215, MATH 255, MATH 256, MATH 265, and you must either have taken or currently be taking one of MATH 256, MATH 257, MATH 267, MATH 316.

Credit exclusion: You cannot receive credit for MATH 318 as well as credit for any one of MATH 302, MATH 303, STAT 241, STAT 251, STAT 302.
