At this point your group should have selected a project topic. I’m hoping that Assignments 6, 7 may have helped. I now want an outline of the project including some references that you have found. Some substantial details about the results you have encountered as well as the Mathematics you hope to explore. This can include actual theorems as well as proof techniques. This assignment can be handed in as a group assignment, namely one assignment for each group. I will give feedback relatively quickly but I won’t be at UBC until Tuesday Feb 26 after the spring break.
