1. General Information

- Course: Math 221 (Matrix Algebra), 2020W Term 2.
- Sections:
  - 201 J. Ray, jishnuray@math.ubc.ca
  - 202 S. Cautis, cautis@math.ubc.ca
  - 203 V. Vatsal, vatsal@math.ubc.ca
  - 204 S. Cautis, cautis@math.ubc.ca
  - 205 V. Vatsal, vatsal@math.ubc.ca
- Course website: includes syllabus and additional information
  [http://www.math.ubc.ca/~cautis/math221-04/](http://www.math.ubc.ca/~cautis/math221-04/)
- Text: **Linear Algebra and its Applications** by David C. Lay
  (revised custom edition for the UBC)

**Homework:** Online homework for the course will be provided via the WeBWorK system. You can find this system by going to the WeBWork site at

[https://webwork.elearning.ubc.ca/webwork2/](https://webwork.elearning.ubc.ca/webwork2/)

and logging in with your CWL ID. Note however that the course website may not be active before the first day of classes.

There will be one assignment posted per week, each due the following week, as per the course schedule. Questions about the HW or the online system may be addressed to either your instructor or to the course TAs.

Please note the following items:

1. You may attempt each question as often as you like until you solve the problem. There is no penalty for a wrong answer. This is to help you correct your own mistakes, and to get instant feedback on your attempts.
2. The questions are generated randomly, and the numbers are different for each student.
3. Please try to do the problems by yourself, and without the use of other calculators or software. Since calculators and software are not allowed in the exams, you should practice working without them.
4. If you really get stuck, you can request help by clicking the email instructor button. However, it may take some time to get a response, so please don't wait till the last minute. v) In general, its a good idea to start the assignments early rather than waiting till the last minute. The deadlines are enforced by the system, and it will shut down automatically when time is up, so give yourself plenty of extra time in case of problems.

Note that the textbook also has many practice problems with answers in the back. It is recommended that you try all these problems, so that you may track your understanding.

**Tests:** There will be two midterm exams (in class) and a final exam. The tests will be closed book-closed notes tests. Calculators will not be allowed.

The (tentative) dates for the two midterms are: Tuesday February 11 and Tuesday March 24.
Grades: Grades will be computed as the maximum of the following:
- Homework 10%, Midterms 20%+20%, Final exam 50% or
- Homework 10%, Best midterm score 20%, Final exam 70%.

The grades of those students who miss a midterm will be computed by the second method.

Synopsis: The course will cover more or less the whole book (with some minor exceptions).
Linear algebra is a fundamental and extremely important topic in mathematics. In fact, many
other areas attempt to reduce more complicated questions to problems in linear algebra. For example,
calculus tries to reduce questions about curves and surfaces (or higher dimensional shapes) to ones
about their tangent lines or tangent planes. These lines and planes are concepts in linear algebra.
Perhaps another way of saying this is that the derivative, the key concept in calculus, is a linear map.
This course is a study of linear maps. We will learn what they are, how to manipulate them as well
as tools (determinants, eigenvectors/eigenvalues, diagonalization) to better visualize them. Along the
way we will also touch on various applications.

Help Rooms: The Math Learning Centre schedule will be available on-line at
http://www.math.ubc.ca/~MLC/

Drop-in tutorials begin during the second week of term and are located in LSK Rooms 301 and 302.

2. Schedule

Here is a rough course schedule, subject to later adjustments.
- Week 1. 1.1 Systems of linear equations, 1.2 Row reduction and echelon forms
- Week 2. 1.3 Vector equations, 1.4 The matrix equation $Ax = b$
- Week 3. 1.5 Solution sets of linear equations, 1.6 Applications of linear systems
- Week 4. 1.7 Linear independence, 1.8 Introduction to linear transformations, 1.9 The matrix
  of a linear transformation
- Week 5. 2.1 Matrix operations, 2.2 The inverse of a matrix
- Week 6. 2.2 The inverse of a matrix, 2.3 Characterizations of invertible matrices
- Week 7. 2.5 Subspaces of $\mathbb{R}^n$, 2.6 Dimension and rank
- Week 8. 2.6 Dimension and rank, 3.1 Introduction to determinants
- Week 9. 3.2 Properties of determinants, 4.1 Eigenvalues and eigenvectors, 4.2 The character-
  istic equation
- Week 10. 4.3 Diagonalization, 4.6 Discrete dynamical systems
- Week 11. 4.6 Discrete dynamical systems, 5.1 Inner product, length, and orthogonality
- Week 12. 5.2 Orthogonal sets, 5.3 Orthogonal projections
- Week 13. 5.4 The Gram-Schmidt process, 5.6 Applications to linear models

3. Official statement about the University's values and policies

UBC provides resources to support student learning and to maintain healthy lifestyles but recognizes
that sometimes crises arise and so there are additional resources to access including those for survivors
of sexual violence. UBC values respect for the person and ideas of all members of the academic
community. Harassment and discrimination are not tolerated nor is suppression of academic freedom.
UBC provides appropriate accommodation for students with disabilities and for religious, spiritual
and cultural observances. UBC values academic honesty and students are expected to acknowledge the
ideas generated by others and to uphold the highest academic standards in all of their actions. Details
of the policies and how to access support are available here:
https://senate.ubc.ca/policies-resources-support-student-success
