The University of British Columbia  
Final Examination - April 20, 2007  
Mathematics 221  
Sections 201, 202, 203  
Instructors: Dr. Macasieb, Dr. Tsai, and Dr. Liu

Closed book examination  
Time: 2.5 hours

Name ___________________________  
Signature _________________________

Student Number _________________

Special Instructions:
- Be sure that this examination has 12 pages. Write your name on top of each page.
- No calculators or notes are permitted.
- Show all your work. Unsupported solutions deserve no mark.
- In case of an exam disruption such as a fire alarm, leave the exam papers in the room and exit quickly and quietly to a pre-designated location.

Rules governing examinations

- Each candidate should be prepared to produce her/his library/AMS card upon request.
- No candidate shall be permitted to enter the examination room after the expiration of one half hour, or to leave during the first half hour of examination.
- Candidates are not permitted to ask questions of the invigilators, except in cases of supposed errors or ambiguities in examination questions.
- CAUTION - Candidates guilty of any of the following or similar practices shall be immediately dismissed from the examination and shall be liable to disciplinary action.
  (a) Making use of any books, papers, or memoranda, other than those authorized by the examiners.
  (b) Speaking or communicating with other candidates.
  (c) Purposely exposing written papers to the view of other candidates.
- Smoking is not permitted during examinations.

Page 1 out of 12
1. [12pt] Consider the following linear system

\[
\begin{align*}
x + 3y - 2z + 2w &= 1 \\
y + z - 2w &= 2 \\
x + 2y - 2z + aw &= 0 \\
2x + 8y - z + w &= b
\end{align*}
\]

For which values of \(a\) and \(b\), if any, does the system have: (Justify your answers!!)

(i) No solution? 
(ii) Exactly one solution?
(iii) Exactly two solutions? 
(iv) More than two solutions?
2. [10pt] Let $S$ be the map in $\mathbb{R}^3$ which rotates points about the $x_1$-axis by an angle $\pi/2$ (the axes are oriented by the right hand rule). Let $T$ be the map in $\mathbb{R}^3$ which translates points by the formula $T(x_1, x_2, x_3)^T = (x_1 + 1, x_2 - 1, x_3)^T$. One of them is a linear transformation and the other is not.

(i) Decide and justify which one is NOT a linear transformation.
(ii) You may assume the other one is a linear transformation. Find its standard matrix.
3. [10pt] For what values of $k$ is the matrix $A = \begin{bmatrix} 0 & 1 & 0 \\ 1 & 0 & 1 \\ 0 & 1 & k \end{bmatrix}$ invertible? When it is invertible, find its inverse.
4. [12pt] Let \( W = \begin{bmatrix} b + 2c - d \\ 2b + 4c - d \\ d \\ -b - 2c + d \end{bmatrix} \mid b, c, d \text{ real} \).

(i) Find a matrix \( A \) such that \( \text{Col } A = W \).

(ii) Find a basis for \( W \).

(iii) If \( B = \begin{bmatrix} 1 & 0 & 1 & 2 \\ 0 & 1 & 0 & 1 \\ 0 & 2 & 0 & k \\ 1 & 1 & 1 & 3 \end{bmatrix} \) and \( \dim (\text{Row } B) = 2 \), find the value of the constant \( k \).
5. [10pt] Let \( A = \begin{bmatrix}
x & 1 & 1 & 1 & 1 \\
1 & x & 1 & 1 & 1 \\
1 & 1 & x & 1 & 1 \\
1 & 1 & 1 & x & 1 \\
1 & 1 & 1 & 1 & x \\
\end{bmatrix} \). Find all values of \( x \) such that \( A \) is not invertible.
9. [8/2/5pt] The matrix \( M = \begin{bmatrix} 2 & -1 & -1 \\ -1 & 2 & -1 \\ -1 & -1 & 2 \end{bmatrix} \).

(i) Verify that \( M \) has eigenvalues 0 and 3, and find the corresponding eigenspaces.
(ii) What is the rank of \( M \)?
(iii) Is \( M \) diagonalizable? Is there an orthogonal set of eigenvectors of \( M \) that forms a basis of \( \mathbb{R}^3 \)? Justify your answers.
