Math 534. Written problems, set 3. Due Tuesday, November 4.
(1) Humphreys, Exercise 2 on p. 34 .
(2) Construct the root systems and Dynkin diagrams for the Lie algebras $\mathfrak{s o}_{5}$ and $\mathfrak{s p}_{4}$. (The calculation will depend on your choice of the matrix $J$ defining the corresponding Lie algebra - recall that both are defined as $\left\{X \in \mathfrak{g l}_{n} \mid X^{t} J+J X=0\right\}$, but the final answer won't). For $J$, you can use the matrices defined in Humphreys, p.3, or alternatively, anti-diagonal with all 1 s in the case of $\mathfrak{s o}_{5}$, and with $1,1,-1,-1$ in the case of $\mathfrak{s p}_{4}$, are also a reasonable choice.
(3) Humphreys, Exercise 9.4 on p. 46.
