***On Leray's Self-Similar Solutions  
of the Navier-Stokes Equations  
Satisfying Local Energy Estimates***

TAI-PENG TSAI

Arch. Rational Mech. Anal. 143 (1998) 29–51

The fifth line from the bottom of page 47 should read as

$$|\Pi(y)| = o\left(\int^{|y|} s^{-2} e^{cs^2/2} ds\right) \quad \text{as } |y| \rightarrow \infty,$$

That is, a factor  $s^{-2}$  is added inside the integral. Everything else remains the same. In fact, the integral is the function  $\phi$  defined on the bottom of the same page. Since  $\phi$  satisfies the original estimate, without the modification it cannot be used to construct comparison functions.

I thank Professor M. RŮŽIČKA for pointing this out to me.
