

## **MATH 444: MATHEMATICAL RESEARCH AND WRITING**

Assignment 8 Due Thursday Mar 10, 2021.

Richard Anstee

This is an individual assignment. For this assignment submit a more complete section as imagined for the term paper. It needs to be in Latex to allow it to be easily combined into the final project. In Assignment 7 you will have outlined the project. Of course this assignment will fill in some of the details that were outlined in Assignment 7. Your submission would consist of a short introduction, definitions/notations (relatively complete), previous work (as appropriate), theorem(s). You can steal content from your earlier assignments or get fresh material (perhaps discovered while working on the project). I am happy enough for people within the groups to support each other but I want individually written assignments, necessarily on different results.i.e. different sections. With groups of size three, then three sections will be submitted. I would imagine a page or two in length. This should contribute to the final project as well as be helpful for Assignment 9, the group progress report (a draft of the final project).
