Final Examination — December 16, 2015Duration: 2.5 hoursThis test has 10 questions on 12 pages, for a total of 80 points.

Dr. G. Slade, Dr. C. Macdonald, Dr. B. Krause, Dr. M. Murugan

- Read all the questions carefully before starting to work. Give complete arguments and explanations for all your calculations. With the exception of #4, answers without justification will not be marked.
- Continue on the back of the *previous page* if you run out of space, *with clear indication on the original page* that your solution is continued elsewhere.
- This is a closed-book examination. **No aids of any kind are allowed**, including: documents, cheat sheets, electronic devices of any kind (including calculators, phones, etc.)

cordance with established rul be articulated by the examiner commencing. Should dishones	conduct themselves honestly and in ac- es for a given examination, which will or invigilator prior to the examination t behaviour be observed by the exam- of accident or forgetfulness shall not be		Examination candidates must not destroy or damage any examination material, must hand in all examination papers, and must not take any examination material from the examination room without permission of the examiner or invigilator.
similar practices, may be imme	cted of any of the following, or any other diately dismissed from the examination and may be subject to disciplinary ac-		Notwithstanding the above, for any mode of examination that does not fall into the traditional, paper-based method, examination candi- dates shall adhere to any special rules for conduct as established and articulated by the examiner.
(i) speaking or communicat unless otherwise author	ing with other examination candidates, zed;		Examination candidates must follow any additional examination rules or directions communicated by the examiner(s) or invigilator(s).

1. Consider the unit sphere consisting of points (x, y, z) with $x^2 + y^2 + z^2 = 1$,

1 mark (a) Determine a normal vector to the tangent plane at a point (x, y, z) on the sphere.

Answer:		

2 marks (b) Determine the equation of the tangent plane at the point $(\frac{1}{2}, \frac{\sqrt{3}}{2}, 0)$, and determine the equation of the tangent plane at the point $(\frac{1}{2}, 0, \frac{\sqrt{3}}{2})$.

Answer:		

2 marks (c) Determine the cosine of the acute angle θ between the two planes in part (b).

Answer:

<u>2 marks</u> (d) Determine the equation of the line of intersection of the two planes in part (b), in symmetric form.

- 2. Wheat production W in a given year depends on the average temperature T and the rainfall R. It is estimated that, at current production levels, $\frac{\partial W}{\partial T} = -2$ Kt/°C (kilotonnes per Centigrade degree) and $\frac{\partial W}{\partial R} = 8$ Kt/cm (kilotonnes per cm).
- (a) It is estimated that the average temperature is rising at a rate of 0.15° C/year and rainfall is decreasing at a rate of 0.1 cm/year. Using this estimated data, what is the current rate of change $\frac{dW}{dt}$ of wheat production (give the units too).

Answer:

4 marks

(b) Suppose that the rainfall this year actually decreased by 0.08 cm while the average temperature increased by 0.2°C. Using differentials, estimate the actual change in production this year (give the units).

3. Consider the function $f(x, y) = e^{-x^2 - y^2}(x^2 + 2y^2)$ on the disk D given by $x^2 + y^2 \le 4$. You may use the fact that $e \approx 2.71828$.

5 marks

(a) Determine the critical points of f inside D and the values of f at those critical points.

Answer:

 $\frac{3 \text{ marks}}{6}$ (b) Determine the absolute maximum and absolute minimum values of f on the boundary of D.

Answer:

1 mark

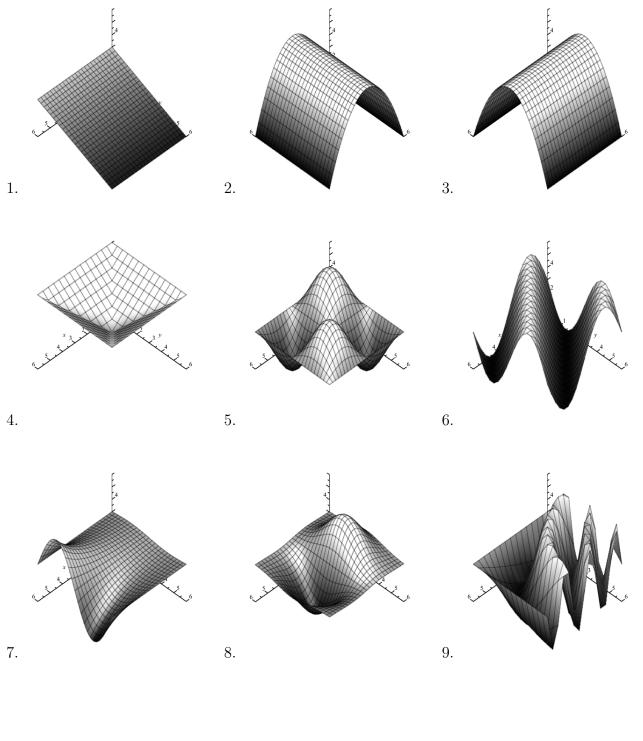

(c) What are the locations and values of the absolute maximum and absolute minimum of f on D?

9 marks
4. Consider the following 9 contour plots and 9 graphs (next page). Each contour plot is the contour plot of one of the 9 graphs. Match each contour plot with the corresponding graph. In the 9 contour plots, the x axis is horizontal, the y axis is vertical and the values of the contours are evenly spaced. Write the number corresponding to the matching graph next to the letter labelling each contour plot.

In the 9 graphs below, the positive x axis is on the left, the positive y axis is on the right, and the positive z axis is upward.

Nothing written on this page will be marked.

- 5. Consider a hill whose height is described by $f(x,y) = 100 \frac{1}{2}x^2 \frac{1}{2}y^2$, measured in metres.
- (a) At time t = 0, I start walking on the hill at position (5, 5, 75). I am walking at 1 metre/sec, and I set out in the direction $\langle \frac{1}{2}, \frac{\sqrt{3}}{2} \rangle$. At what rate is my altitude changing at time 0?

Answer:

(b) Find an upward-pointing normal vector \vec{n} to the surface of the hill.

Answer:

1 mark

3 marks

(c) Douglas fir trees grow vertically (in the z-direction) on the surface of the hill. Where on the hill is the angle α between the tree trunks and the normal vector given by $\alpha = \frac{\pi}{3}$?

Answer:

3 marks

6. Consider the integral

 $\int_0^2 \int_{y^2}^4 y^3 e^{x^3} \, dx \, dy.$

5 marks (a) Write the integral in reversed order.

Answer:

5 marks (b) Using the result of part (a), evaluate the integral.

- 7. Consider the wedge-shaped region contained inside the cylinder $x^2 + y^2 = 9$, bounded above by the plane z = x, and bounded below by the xy plane.
- $5 \mathrm{marks}$

(a) Write a double integral (including limits of integration) whose value is the volume of the wedge-shaped region.

Answer:

5 marks

(b) Evaluate the integral in part (a) to determine the volume of the wedge-shaped region.

6 marks 8. Determine the surface area of the surface given by $z = \frac{2}{3}(x^{3/2} + y^{3/2})$, over the square $0 \le x \le 1, 0 \le y \le 1$.

7 marks 9. Evaluate the integral $\int \int \int_E z \, dV$, where E is enclosed by the paraboloid $z = x^2 + y^2$ and the plane z = 4.

7 marks 10. The average value of a function f(x, y, z) on a 3-dimensional region E is given by the formula $f_{\text{ave}} = \frac{1}{\text{Volume}(E)} \int \int_E f dV$. Let E be the unit ball $E = \{(x, y, z) : x^2 + y^2 + z^2 \leq 1\}$. Its volume is $4\pi/3$. Find the average distance from a point in E to the origin.

Answer:
